1 Corporate Information

Samvardhana Motherson Global Carriers Limited ("SMGCL" or "the company"), was incorporated in India on September 20, 2018. The address of its registered office is 2nd Floor, F-7, Block B-1, Mohan Co-operative Industrial Estate, Mathura Road, New Delhi-110044. The main object of the company is to provide logistic services by all means of transportation by land, sea, rail, inland waterways, air and multimodel transport etc. including services for management of warehouses & logistics and other related services.

Initially, the 100% equity of the company was held by Motherson Lease Solution Limited and by virtue of provisions of Company Act, 2013, the company was wholly owned subsidiary of Motherson Lease Solution Limited. W.e.f 27th March 2019, the 100% equity of the company has been transferred to Samvardhana Motherson International Limited and thus the company was a wholly owned subsidiary of Samvardhana Motherson International Limited.

Up to 20 January 2022 Samvardhana Motherson International Limited (SAMIL) held 4,60,00,000 (including 600 equity shares of nominees) equity shares of the company aggregating to 100% shareholding of the company. The Hon'ble National Company Law Tribunal, Mumbai Bench vide its Order dated December 22, 2021 sanctioned the composite scheme of amalgamation and arrangement amongst Motherson Sumi Systems Limited (MSSL) and SAMIL resulting in merger of SAMIL with MSSL. The appointed and effective date of the merger is January 21, 2022. Accordingly, 4,60,00,000 equity shares held by SAMIL in the company stand transferred to MSSL on 21 January 2022 which then becomes the company's holding company wef 21 January 2022. Also, nominees holding 600 equity shares become nominees of MSSL wef the said date.

2.1 Significant accounting policies

(a) Basis of preparation

Compliance with Ind AS

The financial statements of the Company have been prepared in accordance with Indian Accounting Standards (Ind AS) notified under the Companies (Indian Accounting Standards) Rules, 2015 (as amended from time to time).

The financial statements have been prepared on a historical cost basis, except for the assets and liabilities stated separately, if any.

The financial statements are presented in INR thousand and all values are rounded to the nearest INR thousand, except when otherwise stated.

(b) Presentation of financial statements

The Company presents its balance sheet in order of liquidity. An analysis regarding recovery or settlement within 12 months after the reporting date (current) and more than 12 months after the reporting date (non-current) is presented separately, if required.

Financial assets and financial liabilities are generally reported gross in the balance sheet. They are only offset and reported net when, in addition to having an unconditional legally enforceable right to offset the recognised amounts without being contingent on a future event, the parties also intend to settle on a net basis in all of the following circumstances:

- i) The normal course of business
- ii) The event of default
- iii) The event of insolvency or bankruptcy of the Company and/or its counterparties

(c) Current versus non-current classification

The Company presents assets and liabilities in the balance sheet based on current/ non-current classification. An asset is treated as current when it is:

- Expected to be realised or intended to be sold or consumed in normal operating cycle
- · Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period All other assets are classified as non-current.

A liability is current when:

- It is expected to be settled in normal operating cycle
- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the

reporting period

The Company classifies all other liabilities as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

(d) Foreign currencies

(i) Functional and presentation currency

The Company's functional currency is Indian Rupee (INR) and the financial statements are presented in Indian Rupee (INR).

(ii) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies at year end exchange rates are generally recognised in profit or loss. They are deferred in other comprehensive income if they relate to qualifying cash flow hedges and qualifying net investment hedges or are attributable to part of the net investment in a foreign operation. A monetary item for which settlement is neither planned nor likely to occur in the foreseeable future is considered as a part of the entity's net investment in that foreign operation.

Foreign exchange differences regarded as an adjustment to borrowing cost are presented in the Statement of profit and loss, within finance costs. All other foreign exchange gains and losses are presented in the Statement of profit and loss on a net basis within other income or other expenses.

Non-monetary items that are measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value was determined. Translation differences on assets and liabilities carried at fair value are reported as part of the fair value gain or loss. For example, translation differences on non-monetary assets and liabilities held at fair value through profit or loss are recognised in profit or loss as part of the fair value gain or loss and translation differences on non-monetary assets such as equity investments (other than investment in subsidiaries, joint ventures and associates) classified as FVOCI are recognised in other comprehensive income.

(e) Revenue recognition and Other income

(i) Revenue from contract with customers

Revenue (other than for those items to which Ind AS 109 Financial Instruments are applicable) is measured at fair value of the consideration received or receivable. Ind AS 115 Revenue from contracts with customers outlines a single comprehensive model of accounting for revenue arising from contracts with customers and supersedes current revenue recognition guidance found within Ind AS.

The company recognises revenue from contracts with customers based on a five step model as set out in Ind 115:

Step 1: Identify contract(s) with a customer: A contract is defined as an agreement between two or more parties that creates enforceable rights and obligations and sets out the criteria for every contract that must be met.

Step 2: Identify performance obligations in the contract: A performance obligation is a promise in a contract with a customer to transfer a good or service to the customer.

Step 3: Determine the transaction price: The transaction price is the amount of consideration to which the company expects to be entitled in exchange for transferring promised goods or services to a customer, excluding amounts collected on behalf of third parties.

Step 4: Allocate the transaction price to the performance obligations in the contract: For a contract that has more than one performance obligation, the company allocates the transaction price to each performance obligation in an amount that depicts the amount of consideration to which the company expects to be entitled in exchange for satisfying each performance obligation.

Step 5: Recognise revenue when (or as) the company satisfies a performance obligation

Sale of services

Revenue from sale of services are recorded at single point of time when the performance obligation as per contract has been satisfied.

(ii) Interest income

Interest is recognised using the effective interest rate (EIR) method, as income for the period in which it occurs. EIR is the rate that exactly discounts the estimated future cash payments or receipts over the expected life of the financial instrument to the gross carrying amount of the financial asset or to the amortised cost of a financial liability. When calculating the effective interest rate, the Company estimates the expected cash flows by considering all the contractual terms of financial instrument (for example, prepayment, extension, chargese, call and similar options) but does not consider expected credit losses.

(ii) Dividend

Dividend income is recognised when the right to receive payment is established, which is generally when shareholders approve the dividend.

(f) Income tax

The income tax expense or credit for the period is the tax payable on the current period's taxable income based on the applicable income tax rate adjusted by changes in deferred tax assets and liabilities attributable to temporary differences.

The current income tax charge is calculated on the basis of the tax laws enacted or substantively enacted at the end of the reporting period in India. Management periodically evaluates positions taken in tax returns with respect to situations in which applicable tax regulation is subject to interpretation. It establishes provisions where appropriate on the basis of amounts expected to be paid to the tax authorities.

Deferred income tax is provided in full, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the standalone financial statements. Deferred income tax is not accounted for if it arises from initial recognition of an asset or liability in a transaction other than a business combination that at the time of the transaction affects neither accounting nor taxable profit nor loss. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantially enacted by the end of the reporting period and are expected to apply when the related deferred income tax asset is realised or the deferred income tax liability is settled. Deferred tax assets are recognised for all deductible temporary differences only if it is probable that future taxable amounts will be available to utilise those temporary differences and losses.

Deferred tax assets and liabilities are off set when there is a legally enforceable right to off set current tax assets and liabilities and when the deferred tax balances relate to the same taxation authority. Current tax assets and tax liabilities are off set where the entity has a legally enforceable right to off set and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

Current and deferred tax is recognised in profit or loss, except to the extent that it relates to items recognised in other comprehensive income or directly in equity. In this case, the tax is also recognised in other comprehensive income or directly in equity, respectively.

(g) Leases

The determination of whether an arrangement is (or contains) a lease is based on the substance of the arrangement at the inception of the lease. The arrangement is, or contains, a lease if fulfilment of the arrangement is dependent on the use of a specific asset or assets and the arrangement conveys a right to use the asset or assets, even if that right is not explicitly specified in an arrangement.

As a Lessee

The company applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. the company recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets

i) Right-of-use assets

The company recognises right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any re-measurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets, as follows:

- Motor vehicles: 1 to 5 years
- · Building: 9 years

If ownership of the leased asset transfers to the company at the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

ii) Lease Liabilities

At the commencement date of the lease, the company recognises lease liabilities measured at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by the Company and payments of penalties for terminating the lease, if the lease term reflects the Company exercising the option to terminate. Variable lease payments that do not depend on an index or a rate are recognised as expenses (unless they are incurred to produce inventories) in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Company uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is re-measured if there is a modification, a change in the lease term, a change in the lease payments (e.g., changes to future payments resulting from a change in an index or rate used to determine such lease payments) or a change in the assessment of an option to purchase the underlying asset.

The company's lease liabilities are included in Interest-bearing loans and borrowings.

iii) Short-term leases and leases of low-value assets

The company applies the short-term lease recognition exemption to its short-term leases of vehicles (i.e. those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption to leases of office equipment that are considered to be low value. Lease payments on short-term leases and leases of low-value assets are recognised as expense on a straight-line basis over the lease term.

Quantitative disclosures and other disclosures are in Note 38.

As a Lesso

Lease income from operating leases where the Company is a lessor is recognised in income on a straight-line basis over the lease term unless the receipts are structured to increase in line with expected general inflation to compensate the lessor for the expected inflationary cost increases. The respective leased assets are included in the balance sheet based on their respective nature.

(h) Impairment of non-financial assets

The Company assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Company estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its

In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining fair value less costs of disposal, recent market transactions are taken into account. If no such transactions can be identified, an appropriate valuation model is used. These calculations are corroborated by valuation multiples, quoted share prices for publicly traded companies or other available fair value indicators.

The Company bases its impairment calculation on detailed budgets and forecast calculations, which are prepared separately for each of the Company's CGUs to which the individual assets are allocated. These budgets and forecast calculations generally cover a period of five years. For longer periods, a long-term growth rate is calculated and applied to project future cash flows after the fifth year. To estimate cash flow projections beyond periods covered by the most recent budgets/forecasts, the Company extrapolates cash flow projections in the budget using a steady or declining growth rate for subsequent years, unless an increasing rate can be justified. In any case, this growth rate does not exceed the long-term average growth rate for the products, industries, or country or countries in which the entity operates, or for the market in which the asset is used. Impairment losses including impairment on inventories, are recognised in the statement of profit and loss.

For assets excluding goodwill, an assessment is made at each reporting date to determine whether there is an indication that previously recognised impairment losses no longer exist or have decreased. If such indication exists, the Company estimates the asset's or CGU's recoverable amount. A previously recognised impairment loss is reversed only if there has been a change in the assumptions used to determine the asset's recoverable amount since the last impairment loss was recognised. The reversal is limited so that the carrying amount of the asset does not exceed its recoverable amount, nor exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognised for the asset in prior years. Such reversal is recognised in the statement of profit and loss.

Intangible assets with indefinite useful lives are tested for impairment annually at the end of the financial year at the CGU level, as appropriate, and when circumstances indicate that the carrying value may be impaired.

(i) Cash and cash equivalents

Cash and cash equivalent in the balance sheet comprise cash at banks and on hand short term deposits with original maturities of three months or less that are readily convertible to known amounts of cash and which are subject to an insignificant risk of change in value.

For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Company's cash management.

(j) Financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets

Initial recognition and measurement

All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through profit or loss, transaction costs that are attributable to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Company commits to purchase or sell the asset.

Subsequent measurement

For purposes of subsequent measurement, financial assets are classified in four categories:

- Debt instruments at amortised cost
- Debt instruments at fair value through other comprehensive income (FVOCI)
- Debt instruments, derivatives and equity instruments at fair value through profit or loss (FVPL)
- $\bullet \ \, \text{Equity instruments measured at fair value through other comprehensive income (FVOCI)}\\$

Debt instruments at amortised cost

- A 'debt instrument' is measured at the amortised cost if both the following conditions are met:
- a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
- b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Company. After initial measurement, such financial assets are subsequently measured at amortised cost using the eff active interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included in finance income in the profit or loss. The losses arising from impairment are recognised in the profit or loss. This category generally applies to trade and other receivables.

Debt instrument at FVOCI

A 'debt instrument' is classified as at the FVOCI if both of the following criteria are met:

- a) The objective of the business model is achieved both by collecting contractual cash flows and selling the financial assets, and
- b) The asset's contractual cash flows represent SPPI.

Debt instruments included within the FVOCI category are measured initially as well as at each reporting date at fair value. Fair value movements are recognized in the other comprehensive income (OCI). However, the Company recognizes interest income, impairment losses & reversals and foreign exchange gain or loss in the statement of profit and loss. On derecognition of the asset, cumulative gain or loss previously recognised in OCI is reclassified from the equity to statement of profit and loss. Interest earned whilst holding FVOCI debt instrument is reported as interest income in statement of profit and loss using the EIR method.

Debt instrument at FVPL

FVPL is a residual category for debt instruments. Any debt instrument, which does not meet the criteria for categorization as at amortized cost or as FVOCI, is classified as at FVPL.

In addition, the Company may elect to designate a debt instrument, which otherwise meets amortized cost or FVOCI criteria, as at FVPL. However, such election is allowed only if doing so reduces or eliminates a measurement or recognition inconsistency (referred to as 'accounting mismatch'). The Company has not designated any debt instrument as at FVPL.

Debt instruments included within the FVPL category are measured at fair value with all changes recognized in the statement of profit and loss.

Equity investments

All equity investments in scope of Ind AS 109 are measured at fair value. Equity instruments which are held for trading and contingent consideration recognised by an acquirer in a business combination to which Ind AS 103 applies are classified as at FVPL. For all other equity instruments, the Company may make an irrevocable election to present in other comprehensive income subsequent changes in the fair value. The Company makes such election on an instrument-by-instrument basis. The classification is made on initial recognition and is irrevocable.

If the Company decides to classify an equity instrument as at FVOCI, then all fair value changes on the instrument, excluding dividends, are recognized in the OCI. There is no recycling of the amounts from OCI to P&L, even on sale of investment. However, the Company may transfer the cumulative gain or loss within equity.

Equity instruments included within the FVPL category are measured at fair value with all changes recognized in the P&L.

Derecognition

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e. removed from the Company's balance sheet) when:

- a) The rights to receive cash flows from the asset have expired, or
- b) The Company has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement and either (a) the Company has transferred substantially all the risks and rewards of the asset, or (b) the Company has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Company has transferred its rights to receive cash flows from an asset or has entered into a passthrough arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Company continues to recognise the transferred asset to the extent of the Company's continuing involvement. In that case, the Company also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Company has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Company could be required to repay.

Impairment of financial assets

In accordance with Ind AS 109, the Company applies expected credit loss (ECL) model for measurement and recognition of impairment loss on the following financial assets and credit risk exposure:

- a) Financial assets that are debt instruments, and are measured at amortised cost e.g., loans, debt securities, deposits, trade receivables and bank balance
- b) Financial assets that are debt instruments and are measured as at FVOCI
- c) Trade receivables or any contractual right to receive cash or another financial asset that result from transactions that are within the scope of Ind AS 115.
- d) Loan commitments which are not measured as at FVPL
- e) Financial guarantee contracts which are not measured as at FVPL

The Company follows 'simplified approach' for recognition of impairment loss allowance on trade receivables.

The application of simplified approach does not require the Company to track changes in credit risk. Rather, it recognises impairment loss allowance based on lifetime ECLs at each reporting date, right from its initial recognition.

For recognition of impairment loss on other financial assets and risk exposure, the Company determines that whether there has been a significant increase in the credit risk since initial recognition. If credit risk has not increased significantly, 12-month ECL is used to provide for impairment loss. However, if credit risk has increased significantly, lifetime ECL is used. If, in a subsequent period, credit quality of the instrument improves such that there is no longer a significant increase in credit risk since initial recognition, then the entity reverts to recognising impairment loss allowance based on 12-month ECL.

Lifetime ECL are the expected credit losses resulting from all possible default events over the expected life of a financial instrument. The 12-month ECL is a portion of the lifetime ECL which results from default events that are possible within 12 months after the reporting date.

ECL is the difference between all contractual cash flows that are due to the Company in accordance with the contract and all the cash flows that the entity expects to receive (i.e., all cash shortfalls), discounted at the original EIR.

ECL impairment loss allowance (or reversal) recognized during the period is recognized as income/ expense in the statement of profit and loss (P&L). This amount is reflected under the head 'other expenses' in the P&L. The balance sheet presentation for various financial instruments is described below:

- Financial assets measured as at amortised cost, contractual revenue receivables and lease receivables: ECL is presented as an allowance, i.e.,
 as an integral part of the measurement of those assets in the balance sheet. The allowance reduces the net carrying amount. Until the asset
 meets write-off criteria, the Company does not reduce impairment allowance from the gross carrying amount.
- Loan commitments and financial guarantee contracts: ECL is presented as a provision in the balance sheet, i.e. as a liability. Debt instruments
 measured at FVOCI: For debt instruments measured at FVOCI, the expected credit losses do not reduce the carrying amount in the balance
 sheet, which remains at fair value. Instead, an amount equal to the allowance that would arise if the asset was measured at amortised cost is
 recognised in other comprehensive income as the 'accumulated impairment amount'.

The Company does not have any purchased or originated credit-impaired (POCI) financial assets, i.e., financial assets which are credit impaired on purchase/ origination.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, payables, or as derivatives designated as hedging instruments in an eff active hedge, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Company's financial liabilities include trade and other payables, loans and borrowings including bank overdrafts, financial guarantee contracts and derivative financial instruments.

Subsequent measurement

The measurement of financial liabilities depends on their classification, as described below:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Company that are not designated as hedging instruments in hedge relationships as defined by Ind AS 109. Separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments.

Gains or losses on liabilities held for trading are recognised in the profit or loss.

Financial liabilities designated upon initial recognition at fair value through profit or loss are designated as such at the initial date of recognition, and only if the criteria in Ind AS 109 are satisfied. For liabilities designated Ind AS as FVPL, fair value gains/ losses attributable to changes in own credit risk are recognized in OCI. These gains/ loss are not subsequently transferred to P&L. However, the Company may transfer the cumulative gain or loss within equity. All other changes in fair value of such liability are recognised in the statement of profit or loss. The Company has not designated any financial liability as at fair value through profit and loss.

Loans and borrowings

This is the category most relevant to the Company. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit and loss.

This category generally applies to borrowings and other payables.

Financial guarantee contracts

Financial guarantee contracts issued by the Company are those contracts that require a payment to be made to reimburse the holder for a loss it incurs because the specified debtor fails to make a payment when due in accordance with the terms of a debt instrument. Financial guarantee contracts are recognised initially as a liability at fair value, adjusted for transaction costs that are directly attributable to the issuance of the guarantee. Subsequently, the liability is measured at the higher of the amount of loss allowance determined as per impairment requirements of Ind AS 109 and the amount recognised less cumulative amortisation.

Derecognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The diff refence in the respective carrying amounts is recognised in the statement of profit and loss.

Embedded derivatives

An embedded derivative is a component of a hybrid (combined) instrument that also includes a nonderivative host contract — with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative. An embedded derivative causes some or all of the cash flows that otherwise would be required by the contract to be modified according to a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract. Reassessment only occurs if there is either a change in the terms of the contract that significantly modifies the cash flows that would otherwise be required or a reclassification of a financial asset out of the fair value through profit or loss.

If the hybrid contract contains a host that is a financial asset within the scope of Ind AS 109, the Company does not separate embedded derivatives. Rather, it applies the classification requirements contained in Ind AS 109 to the entire hybrid contract. Derivatives embedded in all other host contracts are accounted for as separate derivatives and recorded at fair value if their economic characteristics and risks are not closely related to those of the host contracts and the host contracts are not held for trading or designated at fair value though profit or loss. These embedded derivatives are measured at fair value with changes in fair value recognised in statement of profit and loss, unless designated as effective hedging instruments.

Off setting of financial instruments

Financial assets and financial liabilities are off set and the net amount is reported in the balance sheet if there is a currently enforceable legal right to off set the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

(k) Fair value measurement

The Company measures financial instruments, such as, derivatives at fair value at each balance sheet date. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

- · In the principal market for the asset or liability, or
- In the absence of a principal market, in the most advantageous market for the asset or liability

The principal or the most advantageous market must be accessible by the Company.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Company uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- Level 1 Quoted (unadjusted) market prices in active markets for identical assets or liabilities
- Level 2 Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable.
- Level 3 Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Company determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Company determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.

External valuers are involved for valuation of significant assets and liabilities, if any. At each reporting date, the Company analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Company's accounting policies.

For the purpose of fair value disclosures, the Company has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.

This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes wherever required:

- Disclosures for valuation methods, significant estimates and assumptions (Note 25)
- Quantitative disclosures of fair value measurement hierarchy (Note 25)
- Financial instruments (including those carried at amortised cost) (Note 25)

(I) Property, plant and equipment

Property, plant and equipment are stated at cost, net of accumulated depreciation and accumulated impairment losses, if any. Capital work in progress are stated at cost, net of accumulated impairment losses, if any. Such cost includes expenditure that is directly attributable to the acquisition of the items and the cost of replacing part of the plant and equipment and borrowing costs for long-term construction projects if the recognition criteria are met. When significant parts of plant and equipment are required to be replaced at intervals, the Company depreciates them separately based on their specific useful lives. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in profit or loss as incurred.

The cost of self-generated assets comprises of raw material, components, direct labour, other direct cost and related production overheads.

Depreciation methods and useful lives

Depreciation is calculated using the straight-line method over estimated useful lives of the assets:

Assets	Useful life
Leasehold improvements	Over the period of lease or useful life, whichever is lower
Office equipment	5 years
Computers	3 years
Furniture & fixtures	6 years
Plant & machinery (Vehicle reefer box)	3 years

Useful life of the assets if lower than the life prescribed under Schedule II to the Companies Act, 2013 if any, is based on an assessment performed by the management of expected usage of the assets. The assets residual values and useful lives are reviewed and adjusted if appropriate, at the end of each reporting period.

An item of property, plant and equipment and any significant part initially recognised is derecognised upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss arising on derecognition of the asset (calculated as the diff refence between the net disposal proceeds and the carrying amount of the asset) is included in the statement of profit and loss when the asset is derecognised.

The residual values, useful lives and methods of depreciation of property, plant and equipment are reviewed at each financial year end and adjusted prospectively, if appropriate.

(m) Intangible assets

Intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is their fair value at the date of acquisition. Following initial recognition, intangible assets are carried at cost less any accumulated amortisation and accumulated impairment losses.

The useful live of intangible assets are as follows:

Assets	Useful life
Software	3 to 5 years

Intangible assets with finite lives are amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the statement of profit and loss unless such expenditure forms part of carrying value of another asset.

(n) Provisions and contingent liabilities

Provisions

Provisions for legal claims, product warranties and make good obligations are recognised when the Company has a present (legal or constructive) obligation as a result of past events, it is probable that an outflow of resources will be required to settle the obligation and the amount can be reliably estimated. Provisions are not recognised for future operating losses.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognised even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

When the Company expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the statement of profit and loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

Contingent liabilities

Contingent liabilities are disclosed when there is a possible obligation arising from past events, the existence of which will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the Company or a present obligation that arises from past events where it is either not probable that an outflow of resources will be required to settle or a reliable estimate of the amount cannot be made.

(o) Employee benefits

Short-term obligations

Liabilities for wages and salaries, including non-monetary benefits that are expected to be settled wholly within 12 months after the end of the period in which the employees render the related service are recognised in respect of employees' services up to the end of the reporting period and are measured at the amounts expected to be paid when the liabilities are settled. The liabilities are presented as current employee benefit obligations in the balance sheet.

Provident Fund

Contribution towards provident fund for employees is made to the regulatory authorities, where the Company has no further obligations. Such benefits are classified as Defined Contribution Schemes as the Company does not carry any further obligations, apart from the contributions made on a monthly basis. The company recognizes contribution payable to the provident fund scheme as expenditure in the statement of profit and loss, when an employee renders the related service.

Gratuity

The Company provides for gratuity, a defined benefit plan (the "Gratuity Plan") covering eligible employees in accordance with the Payment of Gratuity Act, 1972. The Gratuity Plan provides a lump sum payment to vested employees at retirement, death, incapacitation or termination of employment, of an amount based on the respective employee's salary and the tenure of employment. The gratuity plan in Company is unfunded.

The Company's liability is actuarially determined (using the Projected Unit Credit method) at the end of each year. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using interest rates of government bonds. Remeasurement gains and losses arising from experience.

Adjustments and changes in actuarial assumptions are charged or credited to equity in other comprehensive income in the period in which they arise. They are included in retained earnings in the statement of changes in equity and in the balance sheet. Past-service costs are recognised immediately in income.

Compensated Absences

Accumulated compensated absences, which are expected to be availed or encashed within 12 months from the end of the year end are treated as short term employee benefits. The obligation towards the same is measured at the expected cost of accumulating compensated absences as the additional amount expected to be paid as a result of the unused entitlement as at the year end.

Accumulated compensated absences, which are expected to be availed or encashed beyond 12 months from the end of the year end are treated as other long term employee benefits. The Company's liability is actuarially determined (using the Projected Unit Credit method) at the end of each year. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using interest rates of loss in the period in which they arise. Past-service costs are recognised immediately in income.

(n) Dividend

Provision is made for the amount of any dividend if declared, being appropriately authorised and no longer at the discretion of the entity, on or before the end of the reporting period but not distributed at the end of the reporting period.

(q) Earnings per share

(i) Basic earnings per share

Basic earnings per share is calculated by dividing the net profit or loss attributable to equity shareholders by the weighted average number of equity shares outstanding during the period. Partly paid equity shares are treated as a fraction of an equity share to the extent that they are entitled to participate in dividends relative to a fully paid equity share during the reporting period.

The weighted average number of equity shares outstanding during the period is adjusted for events such as bonus issue that have changed the number of equity shares outstanding, without a corresponding change in resources.

(ii) Diluted earnings per share

Diluted earnings per share adjusts the figures used in the determination of basic earnings per share to take into account:

- the after income tax effect of interest and other financing costs associated with dilutive potential equity shares, and
- The weighted average number of additional ordinary shares that would have been outstanding assuming the conversion of all dilutive potential equity shares.

2.2 Significant accounting judgements, estimates and assumptions

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, the accompanying disclosures, and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities off ected in future periods.

Judgements

In the process of applying the Company's accounting policies, there are no significant judgements established by the management.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. The Company based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market change or circumstances arising beyond the control of the Company. Such changes are reflected in the assumptions when they occur.

(i) Useful life of property, plant and equipment

The Company uses its technical expertise along with historical and industry trends for determining the economic life of an asset/component of an asset. The useful lives are reviewed by management periodically and revised, if appropriate. In case of a revision, the unamortised depreciable amount is charged over the remaining useful life of the assets.

(ii) Taxes

Uncertainties exist with respect to the interpretation of complex tax regulations, changes in tax laws, and the amount and timing of future taxable income. Given the nature of business diff refences arising between the actual results and the assumptions made, or future changes to such assumptions, could necessitate future adjustments to tax income and expense already recorded. The Company establishes provisions, based on reasonable estimates. The amount of such provisions is based on various factors, such as experience of previous tax audits and diff erring interpretations of tax regulations by the taxable entity and the responsible tax authority. Such diff refences of interpretation may arise on a wide variety of issues depending on the conditions prevailing in the respective domicile of the companies.

b. Rights, preferences and restrictions attached to shares Equity Shares:

The company has only one class of equity shares having a par value of INR 10 per share. Each holder of equity is entitled to one vote per share held. The company declares and pays dividends in INR. The dividend, if proposed by the Board of Directors, is subject to the approval of the shareholders in the Annual General Meeting, except in case of interim dividend.

In the event of liquidation of the Company, the equity shareholders are eligible to receive the remaining assets of the Company, after distribution of all preferential amounts, in proportion to their share holding.

c. Details of shares held by shareholders holding more than 5% of the aggregate shares in the Company.

Equity shares:	March 31,	2022	March 31, 2021	
N - 00 1	Nos.	%	Nos.	%
Samvardhana Motherson International Limited (Holding company)*	Ξ.	0%	4,60,00,000	100%
Motherson Sumi Systems Limited (Holding company) (January 21, 2022 onwards)*	4,60,00,000	100%	E .	0%

^{*} including 600 shares held by nominees

Up to 20 January 2022 Samvardhana Motherson International Limited (SAMIL) held 4,60,00,000 (including 600 equity shares of nominees) equity shares of the company aggregating to 100% shareholding of the company. The Hon'ble National Company Law Tribunal, Mumbai Bench vide its Order dated December 22, 2021 sanctioned the composite scheme of amalgamation and arrangement amongst Motherson Sumi Systems Limited (MSSL) and SAMIL resulting in merger of SAMIL with MSSL. The appointed and effective date of the merger is January 21, 2022. Accordingly, 4,60,00,000 equity shares held by SAMIL in the company stand transferred to MSSL on 21 January 2022 which then becomes the company's holding company wef 21 January 2022. Also, nominees holding 600 equity shares become nominees of MSSL wef the said date.

As per records of the Company, including its register of shareholders/ members and other declarations received from shareholders regarding beneficial interest, the above shareholding represents both legal and beneficial ownerships of shares.

The long term defined employee benefits and contribution schemes of the Company are as under:

Defined Benefit Schemes

Gratuity

Every employee is entitled to a benefit equivalent to fifteen days' salary last drawn for each completed year of service in line with the Payment of Gratuity Act, 1972. The same is payable at the time of separation from the company or retirement, whichever is earlier. The benefits vest after five years of continuous service.

The reconciliation of opening and closing balances of the present value of the defined benefit obligations are as below:

(i) Present Value of Defined Benefit Obligation		
(i) Present Value of Defined Benefit Obligation	As at	As a
	March 31, 2022	March 31, 202
Obligations at year beginning	836	260
Service Cost - Current	741	393
Past service cost including curtailment gains/losses		
Adjustment on transfer of employees	0.00	84
Interest expense	57	18
Amount recognised in profit or loss	798	411
Remeasurements	-	
Actuarial (gain) / loss on obligations	433	130
Amount recognised in other comprehensive income	433	130
Adjustments due to transfer of employees	(685)	3,236
Payment from plan:		
Benefit payments	(336)	(3,200
Obligations at year end	1,046	836
(ii) Assets and Liabilities recognized in the Balance Sheet		
Present Value of the defined benefit obligations	1,046	836
Fair value of the plan assets (The company has not made any investment in Plan assets)		
Amount recognized as Liability	1,046	836
(iii) Defined benefit obligations cost for the year:		
Service Cost - Current	741	393
Interest Cost (net)	57	18
Actuarial (gain) / loss	433	130
Net defined benefit obligations cost	1,231	540

Note: Estimate of future increases considered in actuarial valuation takes account of inflation, seniority, promotion and other relevant factors such as supply and demand in the

Particulars (vi) Sensitivity Analysis

	Change in Assumption		Change in Assumption Increase in Assumption		Assumption		Decrease in Assumption	
	As at	As at	Impact	As at	As at	Impact	As at	As at
	March 31, 2022	March 31, 2021		March 31, 2022	March 31, 2021		March 31, 2022	March 31, 2021
Discount Rate per annum	0.50%	0.50%	Decrease by	(46)	(35)	Increase by	47	38
Future salary increases	0.50%	0.50%	Increase by	49	36	Decrease by	(45)	(34)

The above sensitivity analysis is based on a change in assumption while holding all the other assumptions constant. In practice, this is unlikely to occur, and change in some of the assumptions may be correlated. When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions the same method (present value of the defined benefit obligation calculated with the projected unit credit method at the end of the reporting period) has been applied as when calculating the defined benefit liability recognised in balance sheet.

(vii) Risk exposure

The gratuity scheme is a final salary Defined Benefit Plan that provides for lump sum payment made on exit either by way of retirement, death, disability, voluntary withdrawal. The benefits are defined on the basis of final salary and the period of service and paid as lump sum at exit. The plan design means the risk commonly affecting the liabilities and the financial results are expected to be:

(a) Interest rate risk: The defined benefit obligation calculated uses a discount rate based on government bonds, if bond yield fall, the defined benefit obligation will tend to increase.

(b) Salary inflation risk: Higher than expected increases in salary will increase the defined benefit obligation.

(viii) Defined benefit liability and employer contributions
Weighted average duration of the defined benefit obligation as at 31st March 2022 is 5.09 years (As on 31st March 2021: 4.95 Years)

Less than a year	Between 1-2 years	Between 2-5 years	Over 5 years	Total
3	17	216	811	1,046
26	55	229	526	836
	year 3	year 1-2 years 17	year 1-2 years 2-5 years 3 17 216	year 1-2 years 2-5 years Over 5 years 3 17 216 811

Defined Contribution Schemes

The Company deposits an amount determined at a fixed percentage of basic pay every month to the State administered Provident Fund for the benefit of the employees.

Amount recognised in the Statement of Profit & Loss is as follows (Refer note 23):

Provident fund paid to the authorities	3,300	2,037
Employee state insurance paid to the authorities	A	180
Total	3,300	2,037

^{*}The carrying amounts of trade receivables, cash and bank balances, loans, short term borrowings, trade payables, and other financial assets and other financial liabilities are considered to be the same as fair value due to their short term maturities.

ii. Valuation technique used to determine fair value

The fair value of financial instruments is determined using discounted cash flow analysis.

30 Financial risk management

The company is engaged in providing logistics services in India to companies of Samvardhana Motherson Group. The regulations, instructions, implementation rules and in particular, the regular communication throughout the tightly controlled management process consisting of planning, controlling and monitoring collectively form the risk management system used to define, record and minimise operating, financial and strategic risks. Below notes explain the sources of risks in which the Company is exposed to and how it manages the risks:

Market risk is the risk that the fair value of future cashflows of a financial instruments will fluctuate because of changes in market price/rate. Market risk comprises; Foreign currency risk, Interest rate risk, Credit risk and Liquidity risk.

Foreign currency risk:

Foreign currency risk is the risk that the fair value or future cash flows of an exposure will fluctuate because of changes in foreign exchange rates. The Company at present does not have any significant foreign exchange transactions, hence involving no risk in this respect.

The derivative instruments and unhedged foreign currency exposure is as follows:

(i) No derivatives outstanding as at the reporting date

(ii) Particular of unhedged foreign exposure as at the reporting date (Net exposure to foreign currency risk)

	As at March 3 Payable / (Red		As at March 3 Payable / (Red	
	Amount in Foreign currency	Amount in INR	Amount in Foreign currency	Amount in INR
USD : INR		28.1	(11,961)	(8,74,947)

Interest rate risk:

Interest rate risk is the risk that the fair value of future cash flows of the financial instruments will fluctuate because of changes in market interest rates. For the period under review, the Company does not have variable rate borrowings, therefore there is no interest rate risk.

The exposure of the Company's borrowing to interest rate changes at the end of the reporting period are as follows:

	As at	As at
	March 31, 2022	March 31, 2021
Fixed rate borrowings	1,74,390	1,14,390
Nil rate borrowings	000	
Total borrowings	1,74,390	1,14,390

Credit risk:

The credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations towards the Company and arises principally from the Company's receivables from customers and deposits with banking institutions. The maximum amount of the credit exposure is equal to the carrying amounts of these receivables.

Liquidity risk:

The liquidity risk encompasses any risk that the Company cannot fully meet its financial obligations. To manage the liquidity risk, cash flow forecasting is performed in the operating division of the Company and managed by Company finance. The Company's finance monitors rolling forecasts of the Company's liquidity requirements to ensure it has sufficient cash to meet operational needs.

(i) Maturities of financial liabilities

The tables below analyse the Company's financial liabilities into relevant maturity groupings based on their contractual maturities for all non-derivative financial

31 Capital management

Risk management

The Company's objectives when managing capital is to safeguard its ability to continue as a going concern, so that it can continue to provide returns for shareholders and benefits for other stakeholders, and maintain an optimal capital structure to reduce the cost of capital. Consistent with others in the industry, the Company monitors Net Debt to EBITDA ratio i.e. Net debt (total borrowings net of cash and cash equivalents) divided by EBITDA (Profit before tax plus depreciation and amortization expense plus finance costs). This is the third year of the operation of the company resulting in negative EBITDA, however, the holding company is committed to provide the necessary financial support for its operations.

Interest due to suppliers registered under the MSMED Act and remaining unpaid as at year end	-	-
Principal amounts paid to suppliers registered under the MSMED Act, beyond the appointed day during the year	91	(e)
Interest paid, other than under Section 16 of MSMED Act, to suppliers registered under the MSMED Act, beyond the appointed day during the year	9-7	-
Interest paid, under Section 16 of MSMED Act, to suppliers registered under the MSMED Act, beyond the appointed day during the year	150	
Interest due and payable towards suppliers registered under MSMED Act, for payments already made	-	(2)
Further interest remaining due and payable for earlier years	-	
Total	14,207	11,230

35 Impact of application of Ind AS 115 Revenue from Contracts with Customers

The Company has adopted Ind AS 115 Revenue from Contracts with Customers .

i. There are no provisions recognised on trade receivables during the period.

ii. Disaggregation of revenue from contracts with customers

Segments	March 31, 2022	March 31, 2021
Revenue by Geography	85	-
In India	5,85,844	3,91,455
Outside India		18,931
Total revenue from contract with customers	5,85,844	4,10,386
Revenue by major product lines		
Sale of services	5,81,752	3,93,437
Other operating revenues	4,093	16,950
Total revenue from contract with customers	5,85,844	4,10,386
Timing of revenue recognition		
At a point in time	5,85,844	4,10,386
Total revenue from contract with customers	5,85,844	4,10,386

iii. Contract Balances

The following table provides information about receivables and contract liabilities from contracts with customers.

	March 31, 2022	March 31, 2021
Receivables (Unconditional right to consideration)	1,27,49	4 1,73,097
Contract liabilities		21

36 Leases

Ind AS 116 Leases was notified on March 30, 2019 and it replaces Ind AS 17 Leases, including appendices thereto. Ind AS 116 is effective for annual periods beginning on or after April 01, 2019. Ind AS 116 sets out the principles for the recognition, measurement, presentation and disclosure of leases and requires lessees to account for all leases under a single on-balance sheet model similar to the accounting for finance leases under Ind AS 17. The standard includes two recognition exemptions for lessees - leases of 'low-value' assets (e.g., personal computers) and short-term leases (i.e., leases with a lease term of 12 months or less). At the commencement date of a lease, a lessee will recognise a liability to make lease payments (i.e., the lease liability) and an asset representing the right to use the underlying asset during the lease term (i.e., the right-of-use asset). Lessees will be required to separately recognise the interest expense on the lease liability and the depreciation expense on the right-of-use asset. The Company has adopted Ind AS 116 effective annual reporting period beginning April 01, 2019 by following modified retrospective approach, however the Company have all leases agreements of short term or low-value assets, due to which there is no impact on financials statements by adoption of Ind AS 116.

The company has lease contracts for various items of vehicles, other equipment and building. Before the adoption of Ind AS 116, the company classified each of its leases (as lessee) at the inception date as either a finance lease or an operating lease.

Upon adoption of Ind AS 116, the company applied a single recognition and measurement approach for all leases except for short-term leases and leases of low-value assets. Refer to Note 2(g) Leases for the accounting policy beginning April 01, 2019. The standard provides specific transition requirements and practical expedients, which have been applied by the company.

Impact Assessment of Ind AS 116
(i) Impact on the statement of financial position (increase/(decrease)) as at March 31, 202

	March 31, 2022	March 31, 2021

March 31, 2022 March 31, 2021 39 Capital commitments: Value of contracts in capital account remaining to be executed (Net of advances of INR NIL){2021: Net of advances of INR NIL} Total

Impact of COVID 19

On March 11, 2020 the World Health Organization declared Coronavirus outbreak as a 'pandemic'. Responding to the potential serious threat that this pandemic has to public health, the Indian Government has taken a series of measures to contain the outbreak, which included imposing multiple 'lock-downs' across the country from March 22, 2020. The Lockdown's were imposed and then relaxed in a phased manner across the year. Another wave of Covid again jolted the world in April'21 and there were again series of lockdowns imposed in India which had very marginal impact on the business which got settled in about a month's time and the business started flourishing again at the pre covid levels across India. Company also carried out the business well during this time and there were no material impacts of the same in the financials during the current year.

The Company is engaged in the business of providing the logistics services in India to the group companies of Samvardhana Motherson Group. Management has considered the unique circumstances and the risk exposures of the Company and has concluded that there is no significant impact on the business operation of the company. The company has taken all necessary measures to control costs & rationalise resources and is taking initiatives to uplift revenue. The company has assessed the potential impact of Covid-19 on the carrying value of property, plant & equipment, trade receivables, investments, and other current assets appearing in the financial statements of the company. In developing the assumptions and estimates relating to the future uncertainties in the economic condition because of the pandemic, the company as at the date of approval of these financial statements has used internal and external sources of information and based on current estimates, expects to recover the carrying amounts of these assets.

41 The company has incurred cash losses in the current and preceding financial year. The summary is as below:

Particulars	March 31, 2022	March 31, 2021
Profit/(loss) for the period after tax	(44,450)	(49,515)
Add: Depreciation: Property, plant and equipment	2,058	137
Add: Depreciation: Right-of-use assets	2,217	28
Add: Amortization: Intangible assets	2,196	1,221
Add/(less): Deferred tax expense/(credit)	(1,582)	8,103
Cash Loss	(39,562)	(40,053)

42 Corresponding figures of previous year are regrouped/rearranged wherever necessary to confirm to the current year classification.
